

# Sand play equipment

## Technical specification

### J33108

1- **The lacquered panels** are made from very high quality plywood 21mm thick, made of alternate layers of thin birch, which offers longevity and an exceptional mechanical strength. The colours are applied by electrostatic spraying of two-component polyurethane lacquer that is free of heavy metals, to ensure high levels of resistance to potentially aggressive chemicals such as anti-graffiti cleaning products.

2- **The buckets** are made of moulded polyethylene.

3- **The tubes** are made of stainless steel guaranteeing lasting durability and reliability of the equipment.

4- **The balconies** are made of 3mm perforated aluminium and lacquered with polyester epoxy resin.

5- **The sliding surfaces** are made of stainless steel 2mm thick, shaped, bent and rolled in one piece.

6- **The stair steps** are made of shaped beaded aluminium sheet, to give the equipment its sturdiness and ensure that it has a long service life.

7- **The platforms** are made from a textured and non-slip compact material (HPL), 12.5mm thick.

8- **The vertical 95mm square posts** are made of laminated pine which has not been treated by chrome or arsenic. The laminated wood is sturdy, splinter-free and is free from shrinking or swelling. The posts are also protected from wear and tear caused by fungi, insects and termites.

9- **The stainless steel fixings** are protected by polyamide anti-vandalism caps.
